

At Kickstart Academy, the Science department is committed to providing an inclusive and engaging curriculum within a stimulating environment that allows students to develop and thrive within the subject.

By studying Science; students will explore a range of real life problems as well as more theoretical learning in order to develop problem solving skills, knowledge of a range of concepts and in doing so increase their understanding and confidence. Students will receive education at both Entry level and GCSE curriculum levels to ensure that all ability ranges are catered for. We work on a combined/synergy Science curriculum to ensure that even students that join us later in the academic year, from a potentially single science background, will still be able to utilise the knowledge they already have when moving forwards.
